## **Resource Guide**

## Mitigating Information Overload

When presenting information to a class either through lectures, vid**eos**yritten materials, it is important to remember our working memory has a finite capacity. Cognitive Load Theory explainsthat effective learning involves managing the complexity of information, minimizing unnecessary distractions, and optimizing the cognitive effort needed for meaningful understanding. In your time-constrained and information rich classrooms, students cafind themselves overwhelmed with a multitude of tasks, stimuli, and information. This cognitive overload can hinder learning, impede comprehension, and contribute to st**Besls** ware four tips to help mitigate information overload when presenting information.

- x Avoid decorative fonts: Usesans serif fonts for digital materials to increase readability allowing students to process textual information more readilyse increased ont size changing the color of the fonor boldingonly to highlightor group information.
- x Present one piece of information at a time: Whether that is a new idea, a step in a process, or instructions for an assignment presenting one new piece of information at a time will make the information more readily digestible to a novice in the field.
- x Replace textwith verbalization: Too many visualat once plits attention, making it difficult to understand althe diagrams, labels and explanatory text presented. However, our memories do separate visual and auditory memories can process them simultaneously. Consider eplacing some of the explanatory text on your materials with oral and audiexplanations.
- x Provide guided notes Note taking is a cognitively demanding task astudents need to
